Лабораторна робота 4.

Тема: Використання SQL для роботи з даними.

Мета: Навчитися виконувати SQL-запити, використовуючи SQLite та Pandas для роботи з даними.

Завдання:

```
import pandas as pd
import sqlite3
import io

    print(f" Файл '{first_file}' завантажено!")
except ImportError:
    df = pd.read_csv("job_opportunities.csv")
    print(" Файл job_opportunities.csv завантажено локально!")

print(f"Рядків: {len(df)}, Стовпців: {len(df.columns)}")

Висновок:

У цій лабораторній роботі ми навчились завантажувати дані з CSV у Pandas, переносити їх у базу SQLite та виконувати SQL-запити для аналізу вакансій. За допомогою агрегатних функцій і групувань ми отримали статистику по зарплатах, рівню досвіду, індустріях та локаціях. Робота показала, що поєднання Pandas і SQL дозволяє ефективно обробляти великі набори даних та робити аналітичні висновки.
